Employment History

- 2019.07-onwards **Research Scientist** at RIKEN Center for Computational Science (R-CCS), High Performance Artificial Intelligence Systems Research Team.
- 2019.07-onwards **Visiting Researcher** at Tokyo Institute of Technology, School of Computing
- 2019.02-2019.06 **Visiting Scientist** at RIKEN Center for Computational Science (R-CCS), High Performance Big Data Research Team.
- 2018.06-2019.06 **Invited Researcher** at AIST-Tokyo Tech Real World Big-Data Computation Open Innovation Laboratory (RWBC-OIL).
- 2018.04-2019.06 **Researcher** at Tokyo Institute of Technology, School of Computing, Department of Mathematical and Computing Science.
- 2014.04-2018.03 **Researcher** at Tokyo Institute of Technology, Global Scientific Information and Computing Center.
- 2005.06-2010.05 **Lecturer / Senior Lecturer** (from 2008) at Moscow State University (Sevastopol Branch, <http://sev.msu.ru/>), Department of Computational Mathematics and Cybernetics.
- 2006.09-2009.06 **Software Architect and Developer** at Outsourcing Ukraine (<http://www.outsourcing-ukraine.com/>).
- 2005.05-2006.09 **Software Developer** at Soft-Pilot 2000.

Education

- 2010-2014 Ph.D., Tokyo Institute of Technology, Graduate School of Information Science and Technology. (obtained 2014.03.26)
- Thesis title: "Memory-Conscious Optimizations for Sorting and Sequence Alignment for Massively Parallel Heterogeneous Architectures."
- 2000-2005 Specialist degree (M.Sc. equivalent), Moscow State University. Department of Computational Mathematics and Cybernetics.
- Thesis title: "Semantic Pseudo-Code: Approach to Meaning-Base Search."

Language Proficiency

Japanese: fluent

English: fluent

Russian: fluent

Ukrainian: fluent

Research Profile

My research interests lie at the intersection of artificial intelligence (**AI**) and high performance computing (**HPC**). This includes work on both problem-oriented aspects (designing better language models, applying AI methods for scientific applications, exploring emergent AI paradigms) as well as infrastructural work (optimizing deep learning software and designing better compute platforms)

Selected Fellowships and Grants

- JSPS KAKENHI Grant number JP22H03600 adopted FY 2022: "Automated, Scalable, and Machine Learning-Driven Approach for Generating and Optimizing Scientific Application Codes".
- HPCI Project hp210265 "Training Novel Types of Large-Scale Language Models: Tuning". 1000000 node-hours on supercomputer Fugaku.
- 2021 ABCI Grand Challenge #3: 1000 A-100 GPU/days for scalable weakly supervised video representation learning study.
- HPCI Project hp200281 "Training Novel Types of Large-Scale Language Models: Preparation". 100000 node-hours on supercomputer Fugaku.
- JSPS KAKENHI Grant number JP17K12739 adopted FY 2017: "Corpora on Demand: Scalable Methods of Obtaining Linguistic Data".
- Japanese Government (Monbukagakusho) scholarship for conducting PhD research 2010-2014.

Supervising Students and Interns

As a research scientist at the RIKEN Center for Computational Science I have been supervising a number of interns admitted to the RIKEN summer internship program, as well as interns invited individually and supported by ours or external researchg funds. Most recently (September to November 2022) I have been supervising (now Dr.) Giovanni Puccetty from the Scola Superiore Noramle, Pisa. His iternship resulted in a publication in a prestigious EMNLP conference.

As a post-doctoral appointee at the Tokyo Institute of Technology I have helped advising PhD work of several students (the main supervisor was prof. Satoshi Matsuoka), the most recent is Shweta Salaria, thesis title "Cross Architecture Performance Prediction".

Teaching Experience

Courses taught as a lecturer / senior lecturer at the Moscow State University, Faculty of Computational Mathematics and Cybernetics through years 2005-2010:

- **Operating Systems:** Architecture of Unix-like operating systems, inter-process communication mechanisms, C programming language.
- **Object-Oriented Software Design:** C++ programming language, object-oriented approach to software development.
- **Computer Graphics:** basic 2D drawing, 3D projections and transformations, shading, ray tracing.
- **Parallel Data Processing:** Theoretical foundations of parallel computing, OpenMP and MPI libraries/run-times, GPU computing.

I was responsible for developing curricula and teaching materials for these courses, as well as conducting the final examinations. I have also taught fundamentals of computer science at the Faculty of Philology of the Moscow State University.

Community Service

Organizing Academic Events

- **The Workshop on Insights from Negative Results in NLP** series (2022, 2023, 2024(accepted))
In conjunction with ACL 2022 - 60th Annual Meeting of the Association for Computational Linguistics. <https://insights-workshop.github.io>
- **Benchmarking in the Data Center: Expanding to the Cloud** in conjunction with PPOPP 2022: Principles and Practice of Parallel Programming 2022. <https://parallel.computer>
- **International Workshop COmputing using EmeRging EXotic AI-Inspired Systems (CORtEX'22)**. Co-hosted with IPDPS 2022 conference. <https://cortex.ws>
- **"Deep Learning from HPC Perspectives: Opportunities and Challenges"** Mini-Symposium at SIAM PP 2018 conference. http://meetings.siam.org/sess/dsp_programsess.cfm?SESSIONCODE=63584 <http://www.acml-conf.org/2019/tutorials/drozdz-rogers/>
- **"The Third Workshop on Evaluating Vector Space Representations for NLP"**. Co-located with NAACL 2019 conference on June 6 or 7, 2019. <https://repeval2019.github.io>

Chairing/ Program Committee Participation

- I have served as an area chair for the series of EMNLP conferences (efficient NLP track) and program committee member of a number of conferences and workshops, including NAACL, *SEM, SC, ISC, PARCO among others.

Tutorials

- **"Text Representation Learning and Compositional Semantics"**. Tutorial 5 at the 11th Asian Conference on Machine Learning (ACML 2019)
- **"Distributional Compositional Semantics in the Age of Word Embeddings: Tasks, Resources and Methodology"**. Tutorial 4 at LREC 2018 conference. http://text-machine.cs.uml.edu/lrec2018_t4

Misc

- From 2017 I serve as one of the organizers of "Tokyo Machine Learning Gym" meetup.

Technical Skills

I stay passionate about software development after moving to academia, continuing to code myself and supervising engineering efforts in related research projects. Technologies in which I'm particularly invested in include:

- **Software Design and Development**: designing complex architectures, managing teams, continuous integration and delivery practices, etc.
- **Python** is one of the main tools I use on a daily basis for prototyping my research ideas, machine learning middle-ware, and back-end development for my web projects.
- **C, C++** for performance-oriented codes, along with such libraries and tools for parallel programming as CUDA, OpenMP, MPI, OpenCL, TBB, etc.
- **Machine Learning technologies** - from edge inference to distributed training on a scale of thousands nodes. I mainly use PyTorch deep learning framework as a base solution, along with higher level tools for training and evaluating models at scale (such as PyTorch Lightning, Megatron DeepSpeed etc), as well as implemented my own solutions for large scale model-parallel training,

interfacing between models (such as language models) and APIs.

- **Web Development:** I like doing front end development for my projects myself, preferring minimalist JavaScript frameworks such as HTMX and Alpine JS. I recently use Tailwind CSS and Pico.css for styling, previously having experience with Bulma and Bootstrap. I opt to static site generation when possible, recently using golang-base Hugo SSG, previous python-based Nikola.
- **Cloud Technologies:** working with back-end-as-a-service provides such as Google Firebase, integrating with various APIs (Calendar etc), using infrastructure-as-a-service providers such as AWS, administering self-hosted servers etc.
- **Misc:** Databases (SQL and noSQL), containers (docker, singularity), exploring new programming languages (Go, Rust), using computer algebra and publishing systems etc.

Recent Projects

AI for optimizing program codes. The most recent project for which I have secured competitive funding from the JSPS KAKENHI program (grant number JP22H03600) is titled "Automated, Scalable, and Machine Learning-Driven Approach for Generating and Optimizing Scientific Application Codes". Computer programs often require labor-intensive manual optimization (re-organization of loops with tiling, fusing, unrolling etc) to perform efficiently on a given hardware target. In this project we develop machine-driven approach to automate software optimization process, particularly focusing of transformation of loops. Focusing on exploring a space of formalized transformations (we are using polyhedral representation to map iteration spaces of loops into multi-dimensional integer sets) allows us to guarantee correctness of generated codes compared to end-to-end generating with language models, popularized recently with models like code-pilot etc.

Developing next national flagship supercomputer. Our center together with industrial partners is currently designing the next machine to succeed supercomputer Fugaku in 2028. My responsibility is to make sure that the new system will excel in running AI workloads: I am coordinating efforts in benchmarking deep learning workloads, surveying emergent trends in development of AI models and methods and evaluating different hardware options, including simulation of not-yet-existing hardware designs.

At the early stages of supercomputer Fugaku development, I had **led an effort for creating deep learning ecosystem** for it. In-depths study of architectures of deep learning frameworks, libraries of specialized performance primitives and intermediate representations allowed us to identify the most promising directions and create large-scale partnership involving Fujitsu Ltd, ARM Ltd, Linaro Ltd. At the later stage of the project, engineering effort was largely moved to Fujitsu Ltd.

During my stay in AIST I was involved in a procurement of a 4000-GPU "ABCI" supercomputer purpose-built by AIST for AI workloads.

I am a **founder and CEO of a company Amigawa GK**, created to help commercialize some of research ideas developed by me and collaborators.

Finally, I stay passionate about **using and further developing my software development skills**. I introduce best software development practices to research work done by me and collaborators, contribute to open-source project and supervise engineering efforts in some of the research projects within the team.

As a software developer / architect I was involved in projects like porting software for managing industrial machinery to a different type of real-time operating system; developing an online trading platform for jewelry and gems; small fun projects like generative art library in Python (<https://pycontextfree.blackbird.pw/>) etc
